Show the locations and dimensions of the Earth Loop Field, manifolds, distributors, cathodic protection system, underground refrigerant controls, earth loop to compressor unit connection, etc. Indicate the scale on the drawing. Reference the building with key dimensions. (next page)

### **IMPORTANT!**

**Be sure to identify and tag the vapor and liquid lines from the earth loop system where they enter the mechanical room, basement, etc. of the building.**

**System Air Flow Determination:** Turn on electric heat in air handler and measure the average inlet and outlet air temperatures. Measure voltage and amperes to the electric heater.
